Hydrant Flushing

Starting Monday May 8th, The Town of Ferdinand Water Department will be conducting town wide hydrant flushing. This process will take place at various locations throughout the town on a daily basis. Flushing times will be Monday – Friday from 8 am- 3 pm.

Flushing is performed to improve the water quality and is a necessary preventative maintenance practice for proper waterline function. Although it may appear to waste water, flushing improves pressures and flow rates needed for fire protection, aids in maintaining proper valve and hydrant operation as well as helps to provide better overall water quality to our customers.

Water will remain safe to drink; however, special attention is recommended, especially before doing laundry. Customers are advised to run cold water taps for five minutes to clear any discoloration in the water that may adversely affect laundry items. The Town of Ferdinand is not responsible for the cleaning and/or replacement of those items.
